

# Introducing our Solar Charged City Electric Car ...it's now a Reality!

Check it out at the **Warm and Cool Stand**

## Power from the sun *From roof to road*

Power your car on free energy from the Sun or cheap night rates and slash your vehicle running costs.

Warm and Cool believes that the age of the electric car is now upon us. Given New Zealand's substantially green electricity, when combined with free electricity sourced from the Sun, we believe that we are on the point of a revolution in the way we commute to work, school and generally get about town. Technological advances made over the past decade are now affordable to the average household resulting in real and significant savings

in the cost of powering our lives - both at home and now on the road.

Warm and Cool can assist you in obtaining the world's biggest selling electric vehicle (sourced directly from Japan), pairing it with electricity generated via Solar Panels allowing you to potentially save thousands of dollars annually on your vehicle running costs and enjoy the quiet smooth comfort of an electric vehicle.

*With an electric car you can forget oil, coolant, oil and air-filters, anti-freeze changes or replacing timing and CAM belts and heavy brake wear.*
